Apraxia of speech (AOS) is an acquired oral motor speech disorder affecting an individual's ability to translate conscious speech plans into motor plans, which results in limited and difficult speech ability.

### **Apraxia of speech - Wikipedia**

Dysarthria is a motor speech disorder resulting from neurological injury of the motor component of the motor-speech system and is characterized by poor articulation of phonemes. In other words, it is a condition in which problems effectively occur with the muscles that help produce speech, often making it very difficult to pronounce words.

### **Dysarthria - Wikipedia**

Part of the controversy is the quality of the exercises and matching the exercises to the child's weaknesses relative to feeding. Then applying this to speech sound productions where the child does produce sound will make a difference.

### **Oral Motor Exercises to Help Speech in Toddlers and**

Motor neurone disease (MND) causes a progressive weakness of many of the muscles in the body. There are various types of MND. This leaflet is mainly about amyotrophic lateral sclerosis (ALS), which is the most common type of MND.
