Functional analysis is a branch of mathematical analysis, the core of which is formed by the study of vector spaces endowed with some kind of limit-related structure (e.g. inner product, norm, topology, etc.) and the linear functions defined on these spaces and respecting these structures in a suitable sense.

Spectrum of a bounded operator Definition. Let T be a bounded linear operator acting on a Banach space over the scalar field \mathbb{K} , and I be the identity operator on X . The spectrum of T is the set of all $\lambda \in \mathbb{K}$ for which the operator $T - \lambda I$ does not have an inverse that is a bounded linear operator.

Abstract: Strongly nonlinear perturbation theory would seem to be an oxymoron, that is, a contradiction of terms. Nonetheless, we here describe perturbation methods for wave categories that are intrinsically nonlinear including solitons (solitary waves), bound states of solitons (bions) and spatially periodic traveling waves (cnoidal waves).

NIKON D800E + 14-24mm f/2.8 @ 14mm, ISO 200, 1/50, f/16.0. Writing an accurate, understandable article on ISO invariance is a daunting task, and I naturally had to simplify some of the information below in order to cover it in a way that is actually readable, especially for those who are not very familiar with sensor technology.
